

# MAINTENANCE OF COURT EQUIPMENT

NET POSTS, NETS, CENTER STRAPS, CENTER ANCHORS AND WINDSCREENS

**PERIODIC MAINTENANCE** – Daily maintenance consists of an inspection to see if any items are missing, torn or damaged. Adjust nets to proper height (42” at posts and 36” high at center strap for tennis and 36” at posts and 34” at center strap for pickleball). No lubrication of net post gears is required. Check to see that the nets are secured to the net posts with lacing twine and that the windscreens are attached to the fence with plastic tie wraps at all points. Do not allow the windscreens to flap in the wind as they may become torn or frayed. If damaged these items are not repairable and must be replaced.

**YEARLY MAINTENANCE** – Windscreens should be rolled up during the winter months and tied off to the fence or removed and stored to preserve their lifespan.
